(54) Title: INTERCONNECTING CABLE

WO 2003/075287 A3

(57) Abstract: The invention relates to the provision of a cable and method of producing the same. The cable can be adapted and used for the generation of audio, video, data, electrical supply and other uses and comprises at least two conductor sets running along the cable. Each conductor set includes at least two conductors wound or twisted round each other with a known degree or ratio of twist. The conductor sets are spaced apart as they run along the cable and in one embodiment this is achieved by providing an elongate member along the cable to retain the spacing of the conductor sets. If required and with reference to the spacing between sets, the degree or ratio of twist or winding of the conductors in each set can be varied between sets. The cable of the invention has significantly improved performance with respect to conventionally available cables.
